Disinfection Recommendations & Guidelines

Haworth International
May 2020
Cleaning

Cleaning is used to remove dirt from surfaces for general hygiene and maintenance.

Cleaning tools include soap, water, and a damp cloth or other non-disinfectant cleaners.

These slides are NOT a guide for general cleaning. For this information, please refer to the Care & Maintenance guide.

Disinfecting

Disinfecting removes up to 100% of bacteria, fungi and viruses from surfaces. Used primarily for hygiene reasons in homes, offices and medical settings.

Disinfecting tools include various disinfectant solutions depending on the material of the surface being cleaned.

The following slides will explain this process and recommend disinfection solutions.
What about anti-microbials?

With the concern surrounding the COVID-19 virus, we see a trend for antimicrobial surface treatments to be increasingly added to products for added infection control. Although antimicrobial agents may provide some effectiveness against bacteria; antimicrobial product treatments have not been proven as an effective treatment in preventing the spread of the novel COVID-19 virus. We do not currently offer any anti-microbial treatments as standard in our Haworth International finishes portfolio, a decision based on the following considerations:

Their effectiveness is not proven, according to the US Center for Disease Control and Prevention stated “no evidence is available to suggest that use of [products impregnated with antimicrobial additives] will make consumers and patients healthier or prevent disease. No data support the use of these items as part of a sound infection-control strategy.”[1]

They may be harmful to people and the environment, with a number of antimicrobial additives having known negative human and environment impacts. In particular, there is a lack of transparency on antimicrobial additives used in a product [2]

They may increase the risk of super-bugs. Laboratory studies show that antimicrobials added to materials and products can contribute to more widespread antibiotic resistance in pathogens [3] and may also cause increased seasonal allergies [4]. They can also inadvertently create false sense of security [3]

They may harm the environment, most antimicrobials are classified as pesticides and therefore pose a risk to human health and the environment. The U.S. Geological Survey (USGS) found the antimicrobial triclosan as one of the most frequently discovered water contaminants[5].
Disinfection guidelines

These recommendations are for the purposes of disinfection only. For general care and maintenance instruction related to the upkeep of a product’s aesthetics over time, please refer to the Care and Maintenance guide.

Most workplace surfaces can be cleaned with these three cleaning solutions:

- **Disinfecting Wipes** (containing Quaternary compound disinfectant)
  - a. Look for products whose active ingredient is a Quaternary Ammonium Compound or “Quat” disinfectant
  - b. Make sure the wipes do not include bleach

- **Alcohol disinfectants**
  - a. 70% medical alcohol (70% is minimum recommended by CDC)
  - b. Disinfecting spray without bleach

- **Cleaners containing Hydrogen peroxide**

NOTE: Improper cleaning and maintenance of any surface or material may result in the voiding of that product’s warranty. A small inconspicuous area should always be tested before large scale cleaning.

*For upholstery fabrics please refer to fabric manufacturers guidelines on appropriate methods of cleaning and disinfecting.
Disinfection guidelines for Seating

**Seating Mesh**
- Quaternary Ammonium Compound Disinfectants
- Alcohol Disinfectants

**Seating Upholstery** (Wool or Polyester)
- Quaternary Ammonium Compound Disinfectants

**Arm Caps**
- Quaternary Ammonium Compound Disinfectants

**Back Frame**
- Quaternary Ammonium Compound Disinfectants
- Alcohol Disinfectants

**Metal Trim**
- Quaternary Ammonium Compound Disinfectants
Disinfection guidelines for Desking

**Screen Upholstery**
(Wool or Polyester)
- Quaternary Ammonium Compound Disinfectants
  - or
- Alcohol Disinfectants

**Glass Screen**
- Quaternary Ammonium Compound Disinfectants
  - or
- Alcohol Disinfectants
  - or
- Hydrogen peroxide cleaners

**Metal Trim**
- Quaternary Ammonium Compound Disinfectants

**Laminate or Melamine Worktop**
- Quaternary Ammonium Compound Disinfectants
  - or
- Alcohol Disinfectants

**Edge Band**
- Quaternary Ammonium Compound Disinfectants

**Hydrogen peroxide cleaners**
Disinfection guidelines for Soft Seating

Seating Upholstery (Wool or Polyester)
• Quaternary Ammonium Compound Disinfectants
  or
• Alcohol Disinfectants

Wooden Trim
• Quaternary Ammonium Compound Disinfectants

Metal Trim
• Quaternary Ammonium Compound Disinfectants

Leather Upholstery
• Quaternary Ammonium Compound Disinfectants
  N.B. Ensure appropriate treatment after disinfection to prevent drying and cracking

N.B. Ensure appropriate treatment after disinfection to prevent drying and cracking.
Important

With all cleaning products, please refer to the manufacturer's label for application, specific product detail, and usage instructions. Read and follow the safety instructions on any cleaning and disinfecting products you use.

Below are additional safety guidelines:

• Clean the area or item with soap and water or another detergent if it is dirty.
• Never mix household bleach with ammonia or any other cleanser.
• Stay away from fire and heat when using alcohol spray, and maintain proper ventilation.
• Leave the solution on the surface for at least 1 minute.
• Do not breathe in product fumes. If using products indoors, use in a well-ventilated area and open windows and doors to allow fresh air to circulate.
